

AFMCP Clinical Applications

Chapter 1

THERE ARE NO CLINICAL APPLICATIONS FOR CHAPTER 1.

Chapter 2 – The G.O.T.O.I.T. Clinical Method

G.O.T.O.I.T.: GATHER

- The next time that you are seeing patients, take time to gather yourself.
- Identify a patient and use the Medical Symptoms Questionnaire (MSQ) and foundational “gather” questions.
- Populate a timeline and identify clinical findings and ATMs.

G.O.T.O.I.T.: ORGANIZE

- The next time you are seeing patients, populate the timeline of one patient.
- Transfer the data to the patient’s matrix.
- Recognize patterns of dysfunction on the matrix.
- Generate an explanation of the unique set of root-cause contributors for that patient.

G.O.T.O.I.T.: TELL

- The next time you are seeing patients in your practice, select one patient with whom you will retell their story.
- Gradually continue to apply this activity at your own pace in order to develop confidence and competency in this skill.

G.O.T.O.I.T.: ORDER

- In your practice going forward, align your clinical explanation of the patient’s conditions with their goals, values, purpose, and preferences; adjust the nature and sequence of interventions accordingly.
- Select one patient with whom you will assess their “stage of change” and help motivate them to advance to the next stage and eventually take action.
- Use the principles of SMART goals to recommend personalized and feasible initial interventions.
- Continue to apply these clinical skills with new patients at your own pace to develop confidence and competency.

G.O.T.O.I.T.: TRACK

- The next time you are in clinic seeing a follow-up patient, ask them if/how their health goals and circumstances have changed since the previous visit.

- Track a patient's progress using a clinical tool such as the Medical Symptoms Questionnaire or PROMIS-10. – Consider how a member of the clinical care team can contribute to management of your patients.
- Adjust interventions/regimen accordingly.

Chapter 3 – Modifiable Lifestyle Factors

TOOLS TO ASSIST IN EVALUATING LIFESTYLE FACTORS AND INITIATING BEHAVIOR

- In your practice begin to implement the suite of lifestyle-behavior-specific IFM Toolkit items with patients.

Chapter 4 – Functional Nutrition

ABCDs: ANTHROPOMETRICS AND VITAL SIGNS

- The next time that you are seeing patients in your practice, perform anthropometric measurements by using the Body Composition Flow Diagram toolkit item.

ABCDs: BIOMARKERS AND FUNCTIONAL LABS

- At your next opportunity when seeing patients in your practice, begin evaluating conventional laboratory test results to detect potential nutrient imbalances.

ABCDs: CLINICAL FINDINGS FROM PHYSICAL EXAMS

- Attempt to immediately begin performing a functional nutrition exam on patients in your practice.

ABCDs: DIET AND LIFESTYLE REVIEW – CLINICAL TOOLS

- Begin using the Diet, Nutrition, & Lifestyle Journal with a patient in your practice

Chapter 5 – IFM Clinical Matrix: Assimilation Node

ASSIMILATION: GUT MICROBIOME AND DYSBIOSIS

- In your practice going forward, gather data from a patient with the intention of identifying ATMs of dysbiosis.
- Populate the timeline and matrix.
- Retell the story to the patient.

ASSIMILATION: GUT INFLAMMATION

- In your practice going forward, gather data from a patient with the intention of identifying clinical findings and ATMs of gut inflammation.
- Populate the timeline and matrix.
- Retell the story to the patient.

ASSIMILATION: ENTERIC NERVOUS SYSTEM

- The next time that you are seeing patients in your practice, remain vigilant for potential clinical findings of gut-brain axis dysfunction.
- Populate them on the patient's timeline and matrix.

ASSIMILATION: LABORATORY TESTING OF GUT DYSFUNCTION

- At your next opportunity when seeing patients in your practice, identify a patient with gut dysfunction.
- Use the Clinical Flow Path to evaluate and treat the patient.

5R INTERVENTIONS

- At your next opportunity when seeing patients in your practice, identify a patient with gut dysfunction.
- Use the Clinical Flow Path to evaluate and treat the patient.

Chapter 6 – Five Additional Core Nodes

COMMUNICATION AND HORMONE BALANCE

- At your next opportunity when seeing patients in your practice, identify a patient with clinical findings of adrenal dysregulation.
- Apply the Clinical Flow Paths as you proceed through the GOTOIT steps.

TRANSPORT AND CARDIOMETABOLIC

- Identify a patient in your practice with cardiometabolic syndrome.
- Using the Clinical Flow Path, follow it to evaluate and treat the patient.
- Gradually continue to apply this activity at your own pace in order to develop confidence and competency in this skill.

ENVIRONMENTAL HEALTH

- In your practice going forward, when you evaluate a new patient, identify their ATMs of susceptibility, exposure, and effects of elevated total toxic load.
